# PocketWeb at a glance

One self-contained executable. No install, no runtime, no configuration.

Point it at a folder: every folder becomes a page, every file a part of it.

File names set the order, the date and the heading level.

Dot-files set the header, footer, aside, styles, scripts and layout.

Edit a file, reload the page: the change is there.

This PDF is a downloadable file on the demo home page.
